PREFACE

This publication was prepared by the Labor Market Information Section of the Colorado Department of Labor and Employment, in cooperation with the Employment and Training Administration, U.S. Department of Labor. It is published annually and is designed to provide historical, current, and projected labor market information for Colorado and various regions within the State. For the reader's convenience, the report is divided into sections based on subject matter and geographical location. The first section contains narrative, graphs, and tables on major industry employment in Colorado. The second section focuses on particular occupations and occupational groups. Section three contains general demographic information, including personal income data, labor force and population by race/ethnicity, and the poverty population. Section four contains data from the Department of Labor's Employment Service. Following section four are eleven separate sections, each of which contains labor market information on a particular geographic area of the State. Ten of the areas coincide with Service Delivery Areas under the Job Training Partnership Act.

Comments, suggestions, and questions regarding content and format are invited and may be addressed to:

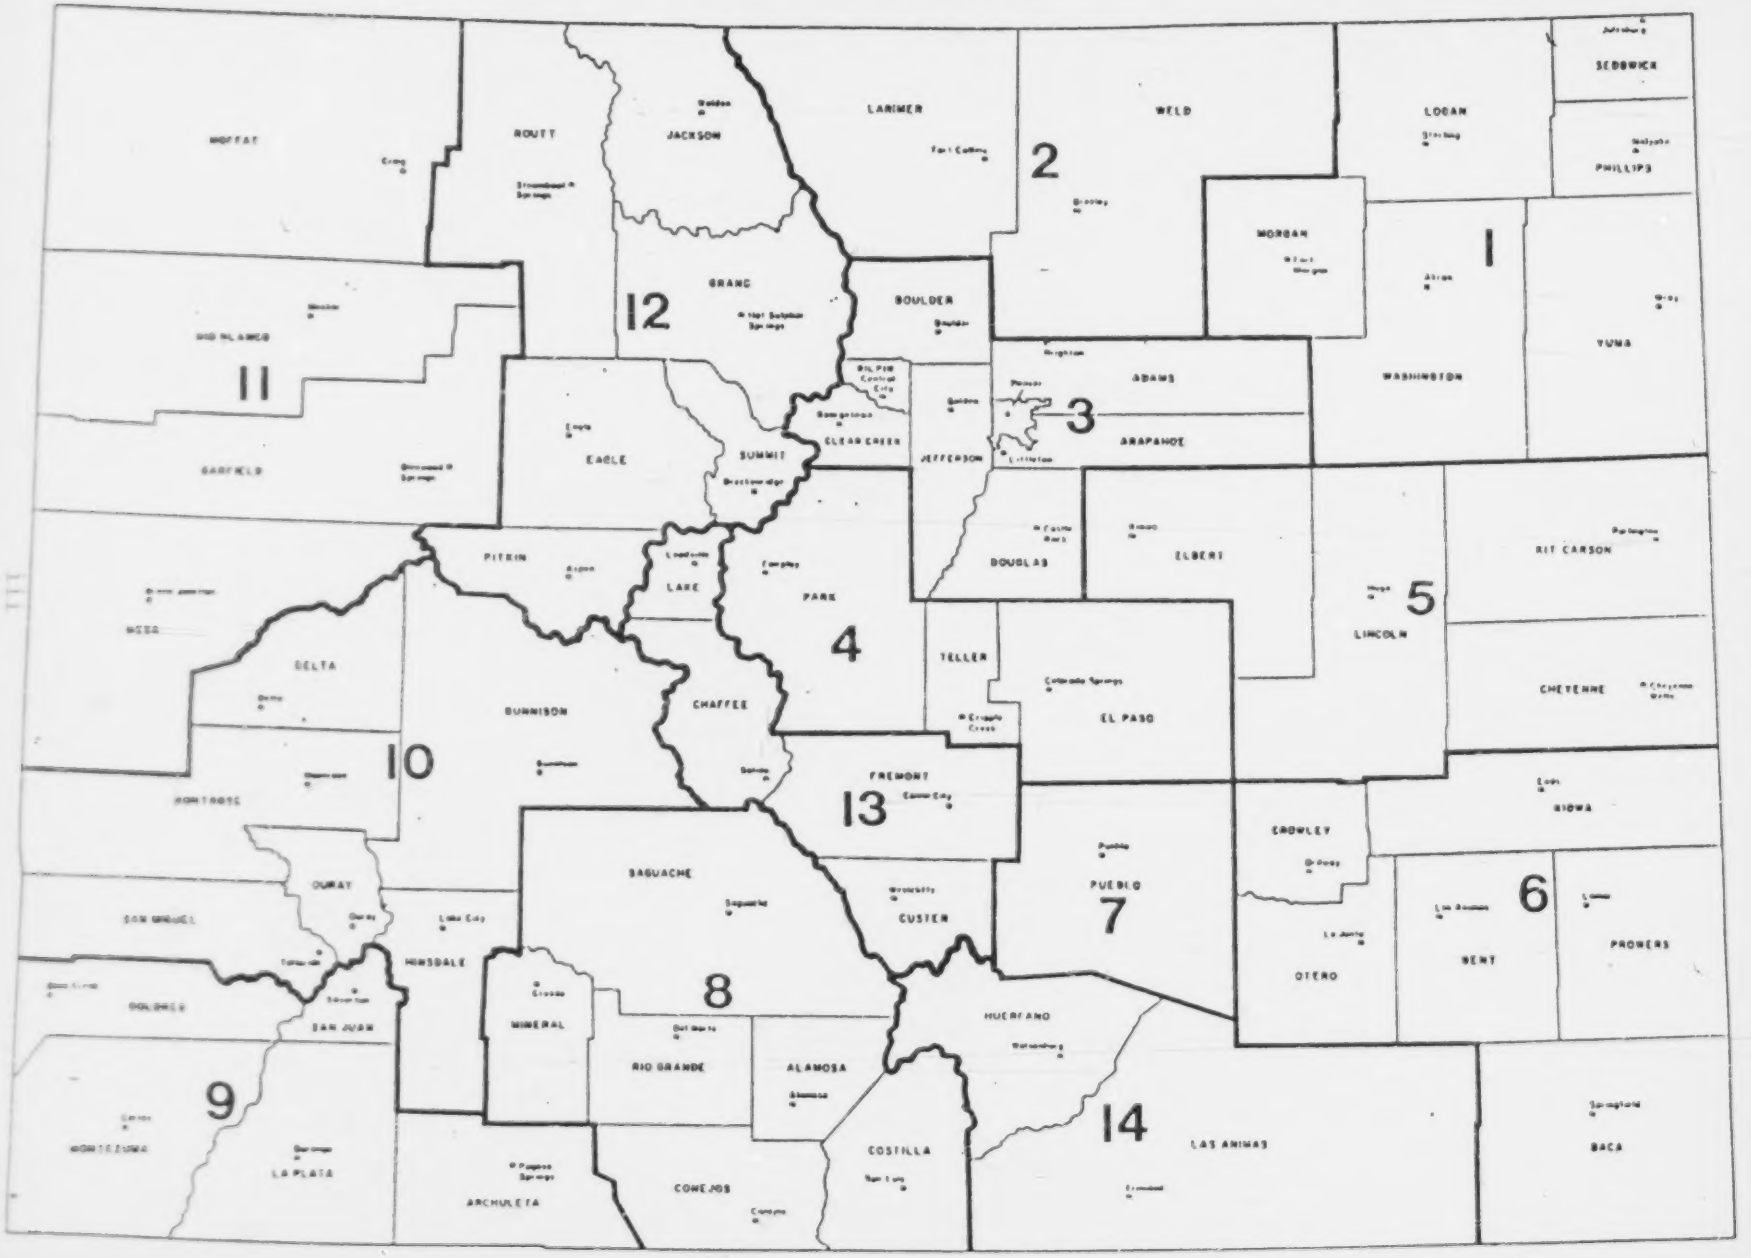
STATE OF COLORADO



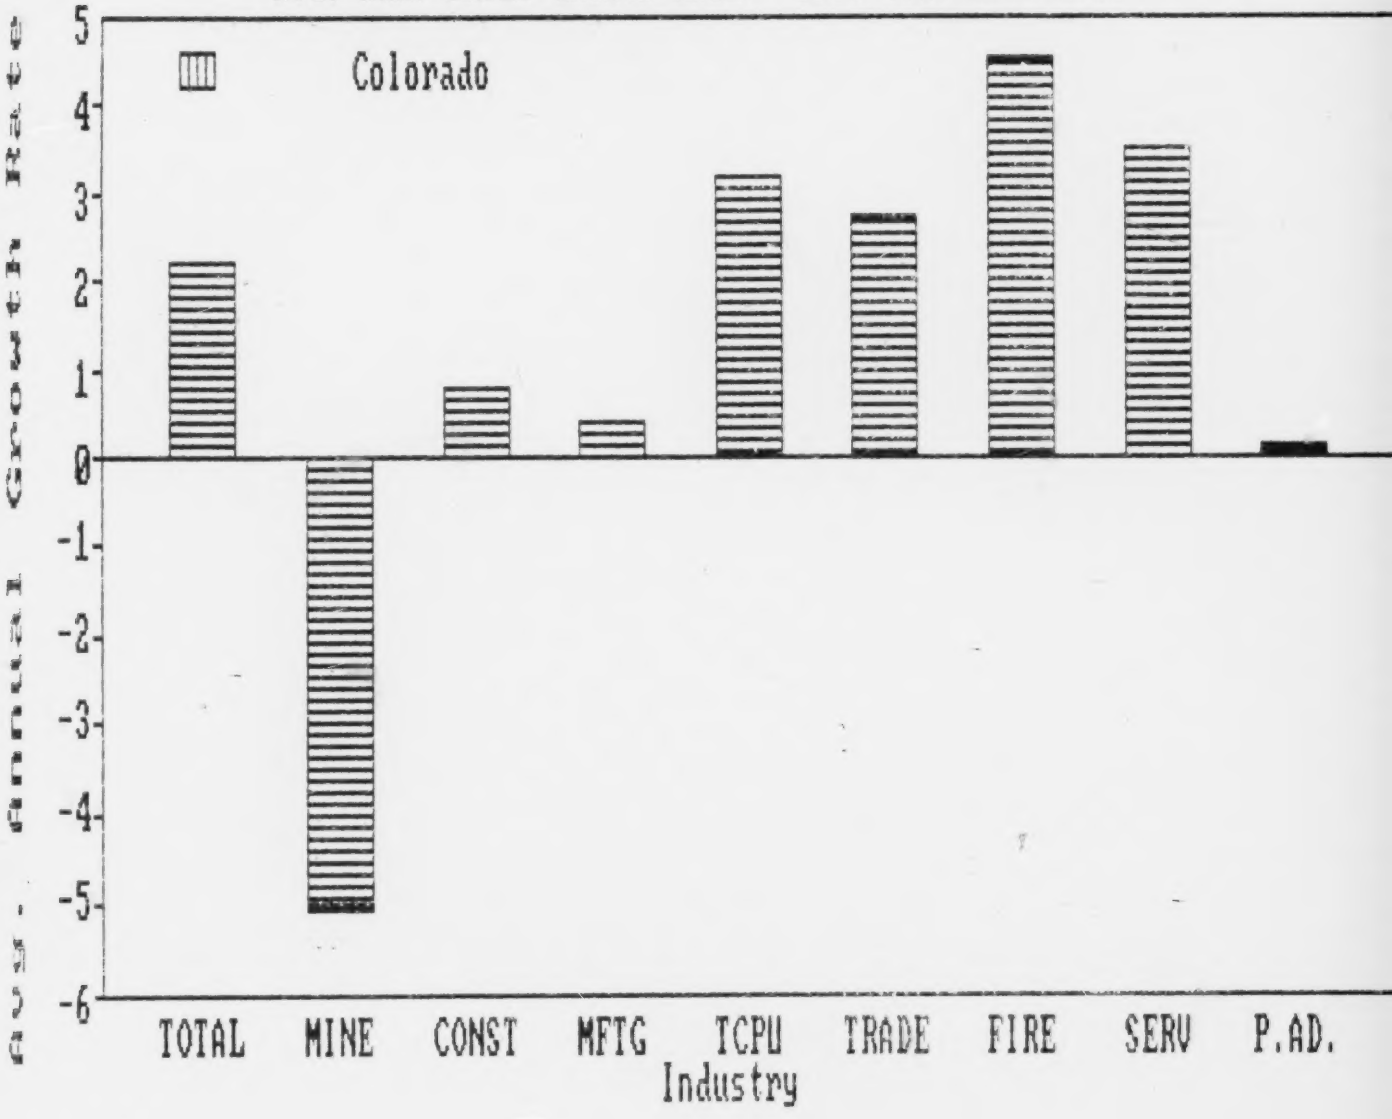
SECTION I

HISTORICAL AND PROJECTED INDUSTRY INFORMATION

COLORADO AND THE UNITED STATES

This section contains narrative, graphs and tables on employment by major industry division in Colorado and the United States.

AVG. ANN. EMPL. GROWTH RATE*- 1ST. QTR. 1981-1986



*Based on ES-202 Employment Series

COLORADO INDUSTRY EMPLOYMENT OUTLOOK

FISCAL YEAR 1986* SUMMARY

The nation's gross national product grew by 2.5 percent in fiscal year 1986. Approximately 2.9 million nonagricultural jobs were added in fiscal 1986, compared with 3.9 million in fiscal 1985. Fiscal and monetary policies at the national level remained highly expansionary, with both government spending and the supply of money growing at rapid rates. The nation's trade deficit continued to worsen, as exports fell and imports rose in constant dollar terms.

In Colorado, the employment base, when measured by jobs covered by unemployment insurance, was virtually flat in fiscal year 1986. A barely discernible 600 net covered jobs were created in fiscal 1986. Expected job losses in the Mining and Construction industry divisions combined with unexpected losses in Manufacturing and Trade to nearly offset gains in other industry divisions. Various factors were responsible for job losses in each industry, but all declining industries had one factor in common: excess supply in the product market leading to slow production, business failures, and layoffs.

The following section outlines our general assumptions regarding the behavior of selected key macroeconomic variables that will determine in large part the direction of the Colorado economy in the next 18 months.

Fiscal Years 1987 and 1988

The federal budget deficit was about 220 billion dollars in fiscal year 1986. This marks the second year in a row that the deficit has exceeded 200 billion dollars. Data from early fiscal year 1987 suggests a positive trend, with federal revenue rising and outlays falling. However, the Tax Reform Act of 1986 adds a large element of unpredictability to the future revenue picture. On balance, it is expected that there will be only a small reduction ($20 to $30 billion) in the federal budget deficit in fiscal year 1987.

The exchange value of the dollar has fallen significantly relative to the currencies of most of the major U.S. trading partners in the past two years. This development would be expected in theory to lead to an improvement in the U.S. trade balance by making foreign goods more expensive relative to domestically-produced goods. However, the U.S. trade deficit,

* July 1985 - June 1986

as measured in current dollars, has actually increased in the past two years. The measurement of trade in terms of current dollars can be misleading, however, as movements in currency exchange rates can hide real changes in export and import volume. After adjusting for currency revaluations and inflation, it appears that the U.S. position in international trade is gradually improving.

Despite signs of improvement, significant obstacles still need to be overcome in order for the U.S. to achieve balance in its merchandise trade account. Many Asian, African, and Latin American countries hold significant cost advantages over the U.S. in agricultural, mining, and manufactured goods. Although the dollar's devaluation improves the competitive position of the U.S. relative to most of its trading partners, several significant trading partners, such as South Korea and Taiwan, peg movements of their currencies to movements in the dollar. Thus, relative prices of those country's products vis-a-vis U.S. products remain essentially unchanged. Export-dependent countries such as Japan may see domestic income growth fall as a result of their currencies strength relative to the dollar, thus hurting chances that they will become strong markets for U.S. exports. Finally, subtle forms of protectionism and export subsidies in competing countries hinder U.S. exporters who are trying to gain shares in those markets.

Assuming that interest rate differentials between the U.S. and other major world economies stay close to their current levels, the U.S. merchandise trade deficit is expected to improve somewhat in the next two years.

The outlook for capital spending is mixed. A recent survey1/ by the Commerce Department indicates that business is planning to increase its capital spending by only 0.2 percent in 1987. Real capital spending by manufacturers is expected to decline by 2.6 percent in 1987, while spending by nonmanufacturing firms is expected to rise by 2.1 percent. The plant capacity utilization rate has hovered at around 80 percent for the past two years, although the rate has declined slightly in recent months. It is expected that capital spending will only show slight growth in the coming year.

The Tax Reform Act of 1986 will curtail or eliminate most tax-based incentives for investment in plant and equipment. The investment tax credit will be repealed retroactively to January 1, 1986. Many firms who were users of the credits have been anticipating their repeal for some time, and have probably adjusted their investment schedules accordingly. Thus some of the negative effects on investment due to the loss of the credits have probably already been realized.

Tax reform will reduce corporate tax rates dramatically. This will bolster revenues for many companies, especially those that have not relied heavily on tax breaks in the past. On balance, the amount of tax that the business sector pays will rise over the next five years, and the burden will be at least partially shifted back to consumers in the form of higher prices.

1/ Seskin, Eugene P. and David F. Sullivan, "Plant and Equipment Expenditures," Survey of Current Business, December 1986, p. 17.

It is unlikely, however, that the rate of inflation in the coming year will be markedly higher than it has been in the last two years. Overall wage increases will be slight. Energy and housing costs should remain stable or decline slightly. The money supply will continue to grow at moderate to high rates, but will not present a major threat to the rate of inflation because of declining money velocity. On balance, the increase in the consumer price index will probably not exceed four percent in the coming year.

Finally, with stable prices, declining tax rates, and slow but steady growth in disposable income, consumer spending should continue to grow slightly in the coming year. Growing consumer spending should set the stage for low to moderate growth rates in gross national product in fiscal years 1987 and 1988.

Given the national and international economic milieu outlined above, the growth rate for covered jobs in Colorado for fiscal year 1987 is projected to be 1.2 percent (16,000 net new jobs) followed by a 2.3 percent (32,000 net new jobs) increase in fiscal year 1988. Any major deviations from the assumptions outlined above (e.g., the national economy slipping into a recession) will affect employment projections accordingly.

Following is a brief analysis of the current and expected trends in eight major industry divisions. All quoted figures pertain to the State of Colorado unless otherwise indicated.

The Mining Division

Overall mining employment in the State fell by 20 percent between the second quarter of 1985 and the second quarter of 1986, leaving total mining employment at about 27,700. About 5,800 of the 6,700 jobs lost during this period were in the oil and gas sector. Sharp declines in the price of oil in early 1986 forced many domestic producers out of business. Many of the jobs that were lost carried relatively high salaries; thus, their loss probably translated in a substantial negative income multiplier effect, leading to job losses in other industries.

For the short term, the bulk of the job losses have probably already occurred in the oil and gas sector. Recent efforts by the Organization of Petroleum Exporting Countries (OPEC) to stabilize international oil prices were only partially and temporarily successful. Given the continued fractious nature of this organization, it is doubtful that their efforts at re-establishing the primacy of their cartel will be successful in the near future. The relative impotence of OPEC, combined with other factors such as continuing gains in energy efficiency and slow economic growth, make it unlikely that oil and gas employment will increase significantly during the next two years. The sector is expected to remain flat or fall slightly in the next two years.

Metal mining employment in the state has been adversely affected by low prices for primary metals, slack demand due to input substitution, and competition from foreign producers. Although relative prices have shifted

slightly since the dollar began falling in value, costs of production are still markedly lower in most countries competing with the U.S. in international markets.

Nearly 75 percent of coal production nationwide is used for electricity generation. Although demand for coal can be expected to grow steadily with population growth, excess capacity and low prices in international markets are currently the rule. Slack production in the steel industry has also dampened demand for metallurgical coal.

Given the expectation of continuing low prices and excess capacity, the mining division is expected to experience slight employment declines in fiscal years 1987 and 1988.

The Construction Division

Covered jobs in construction declined by 8,800 from the second quarter of 1985 to the second quarter of 1986. Dramatically declining interest rates led to a relatively strong showing in new residential building and sales of existing homes. However, the continuing oversupply of office and retail space led to a dramatic decline in construction contracts for this type of building.

Tax reform will primarily affect the market for nonresidential buildings. By imposing a less generous depreciation schedule on owners of office buildings, it will make a market already suffering from oversupply even less attractive to potential builders. Tax incentives for homeowners were preserved in the new law; thus, the new law will have no direct effect on home building. However, given that the new bill phases out deductions of interest paid for other items, it should increase the importance of home ownership as a tax advantage.

In the face of extreme oversupply, reduced tax incentives, and a generally slow economy, it is doubtful that we will see an improvement in nonresidential construction employment for at least one year. Although declining interest rates would normally spur residential construction, the oversupply of existing housing and a very low level of migration into Colorado will dampen new residential construction in the coming year. It is expected that overall construction will decline by 1.1 percent in fiscal year 1987, followed by a flat or very slight growth rate in fiscal 1988.

The Manufacturing Division

The division as a whole lost 6,300 jobs from the second quarter of 1985 to the second quarter of 1986. The losses were widespread, as only three of nineteen major manufacturing sectors experienced gains in employment during this period. The sectors that gained are Lumber and Wood Products, Except Furniture; Paper and Allied Products; and Transportation Equipment. The losses brought total Manufacturing employment back to approximately the same level that it was in late 1983, when Colorado began to come out of the 1982-83 recession.

Manufacturers have faced severe competition for several years in both the domestic and international markets. The strength of the dollar's purchasing power relative to other major currencies gave foreign producers significant cost advantages in the early part of the current economic expansion. The decline in the dollar's value in the past two years should lead to a slight improvement in the U.S. trade deficit in the coming year as prices of U.S.-made goods become more competitive in international markets. However, any significant growth in U.S. exports will depend to a large degree on continuing income growth in foreign countries.

Given our expectation of continuing high levels of import competition, decreasing capital investment by manufacturers, and relatively stable domestic prices, overall manufacturing employment is expected to show a slight decline in fiscal 1987. Employment should stabilize or grow slightly in fiscal 1988 as domestic manufacturers begin to gain a foothold in foreign markets.

The Transportation, Communications, and Public Utilities Division (T, C, and PU)

The division as a whole added 1200 jobs between the second quarters of 1985 and 1986, an increase of 1.2 percent. Motor Freight Transportation and Warehousing fell by one percent, while Air Transportation employment increased by 9.3 percent and the Communications sector fell by 3.8 percent.

The Motor Freight Transportation sector has experienced a long period of adjustment since the industry was deregulated in the 1980's. Although employment levels have fluctuated in the past several years, employment in the second quarter of 1986 was slightly higher than it was two years previous. Lower than normal manufacturing and construction activity and very slow population growth will prevent the Motor Freight Transportation sector from realizing any major increases in employment in fiscal year 1987. However, improvement in goods-producing sectors should lead to small increases in employment in fiscal year 1988.

The Air Transportation sector suffered the loss of approximately 4000 jobs in early fiscal year 1987 with the demise of Frontier Airlines. It is estimated that approximately 30 to 50 percent of these workers were picked up by other airlines by the end of 1986. Denver has enormous stature as a major air transportation hub, and employment growth in the sector is inevitable. However, it is uncertain whether gains will outweigh losses in fiscal year 1987. If the gates that were previously owned by Frontier are allocated to other carriers by late spring, it is expected that the air transportation sector will show slight to moderate gains in employment in the next 18 months.

The T, C, and PU division as a whole is expected to grow by 1.3 percent in fiscal 1987, followed by a 3.2 percent growth rate in fiscal 1988.

The Trade Division

Between the second quarters of 1985 and 1986, employment in Trade fell by 1.1 percent. Of the eight major sectors within Retail Trade, General

Merchandise Stores and Food Stores experienced gains in employment, while the remaining six sectors either remained stable or lost employment. Wholesale Trade employment fell by 8.2 percent.

It is apparent that the rapid increases in trade employment in the early part of Colorado's economic recovery (a net increase of 30,600 covered jobs between the second quarters of 1983 and 1985) led to an environment of excess supply. In the face of declining growth rates in basic industries by the middle of 1985, trade employment began to retrench to a level that could be realistically sustained by the underlying growth in personal income. Hiring for the 1986 holiday season in Colorado and the nation was more subdued than normal.

It is likely that most of the retrenchment in trade employment has already run its course. Consumer incomes will be bolstered, at least temporarily, by lower federal tax liabilities. This development, combined with a continuing competitive pricing environment, should lead to improvements in trade employment in the coming two years, although growth rates will be smaller than the average for the last five years.

The Finance, Insurance and Real Estate Division (FIRE)

Overall employment in the FIRE division increased by 2.3 percent between the second quarters of 1985 and 1986. The Banking and Real Estate sectors experienced declines (-0.6 and -4.3 percent, respectively), while major gains were realized in Insurance (6.6 percent) and Credit Agencies Other Than Banks (11.7 percent). The high demand for personal credit and new and refinanced mortgage loans led to significant employment increases in Personal Credit Institutions (+400) and Mortgage Bankers and Brokers (+1400).

The gradual deregulation of financial services that has taken place in the eighties has led to expanded customer service, growth of nonbank establishments, and smaller profit margins. One result of deregulation has been a shifting of the distribution of employment between Banks (SIC 60) and Credit Agencies Other Than Banks (SIC 61). In the second quarter of 1983, employment in Banking comprised 60.5 percent of the total employment in SIC's 60 and 61, while Credit Agencies Other Than Banks had a 39.5 percent share. By the second quarter of 1986, Banking's share of employment fell to 53.8 percent, while the non-bank credit agencies share rose to 46.2 percent. However, both sectors were able to add large numbers of employees over the same three-year period due to substantial growth in demand for financial services.

The demand for personal and business loans is expected to grow at a considerably slower pace in 1987 as consumers and business firms work on reducing already high credit balances. A probable merger between United and Intrawest banks will lead to a consolidation of some services and the elimination of some jobs. As a result of these developments, the employment growth rate in the FIRE division is expected to be 1.8 percent in fiscal year 1987, considerably lower than the 4.5 percent average annual growth rate of the last five years. In fiscal year 1988, the growth rate is expected to approach normal levels.

The Services Division

The division as a whole added approximately 15,800 net new jobs between the second quarters of 1985 and 1986. With a 3.7 percent growth rate, it easily outperformed all other major industry divisions in terms of job growth. All 15 major sectors within Services experienced growth in this period. Exceptionally strong performers were Business Services (2500 net gain), Health Services (+3900), Educational Services (including Government, +3800), and Miscellaneous Services (+2500).

The Business Services sector has benefitted from an increasing tendency in business to "contract out" various functions, e.g., accounting, data processing, or janitorial tasks. While this trend is surely responsible for a portion of the job gains in business services, it is also responsible for some of the employment declines in the goods-producing sectors. Many employers realize cost savings by contracting out for services instead of maintaining their own staff for those purposes. This trend will probably continue for the foreseeable future.

Demand for educational services has been increasing for several reasons. The children of the baby-boom generation are entering school, increasing the need for primary and secondary school teachers. College enrollment is increasing, especially in community colleges and technical schools that offer short-term curriculum. It is expected that the increasing realization of the link between education and good employment opportunities will lead to continuing job growth in this sector.

Although growth in the Services division should be strong relative to other major industry divisions in the coming two years, growth rates are expected to be lower than the industry average for the past five years due to weakness in the overall economy.

The Public Administration Division

Approximately 600 net new jobs were added in Public Administration between the second quarters of 1985 and 1986. With steady but very slow increases in population and government spending expected, this division should add approximately 500 jobs per year in fiscal years 1987 and 1988.

NOTE: There are three major conceptual differences between estimates in the above table and estimates on the previous page. The above table contains elements of employment not covered by unemployment insurance. It is done on a calendar year rather than a fiscal year basis. Finally, government employment is shown separately rather than being combined with similar private sector employment.

SECTION II

OCCUPATIONAL INFORMATION

COLORADO AND THE UNITED STATES

This section contains a small sample of the occupational information resources that are available from the Labor Market Information Section. Additional information can be obtained by calling 866-6322 or 866-6320.

Occupational growth trends are expected to depart from the recent past for many broad and detailed occupational groups. Some occupations, especially in the clerical group are expected to slow their rate of growth considerably, while others mainly blue collar occupations that grew in the past, are expected to decline. These changes result from changes in industry growth trends, a projected slowing of total employment growth and from technological changes that affect the occupational structure of industries. The main causes of occupational structure changes are technological change, changes in business practices and methods of operation and product demand changes. The growing use of computer technology is expected to increase the need for systems analysts and computer programmers in nearly all industries and, therefore, these occupations will account for an increasing share of employment. An example of changes due to structure of an industry is the growing tendency of businesses to contract out building cleaning services. This will reduce the proportion of janitors and cleaners on industry employment records but will be offset by significant employment gains in the building cleaning services industry. An example of changes in demand for goods and services provided by an industry level is the educational services industry, which will have an increase in demand for elementary school teachers as the number of elementary school age children rises, but a decline in demand for college teachers as the number of college age students decline. An annual average growth rate of 1.5% is expected during the upcoming decade. The executive, managerial and administrative occupations, professional specialties and technicians and related workers groups are all expected to have growth rates larger than the overall employment growth rate. Despite this projection, growth in these occupations will be slower than they were in the 1973-1984 period.

EMPLOYMENT PROPORTIONS OF MAJOR OCCUPATIONAL GROUPS

OCCUPATION	1984	PROJ. 1995
Executives, Administrators and Managerial Wkrs.	10.6	11.2
Professional Workers	12.0	12.7
Technicians & Related Wkrs.	3.0	3.4
Salesworkers	10.5	10.9
Private Household Workers	.9	.7
Service Wkrs, X Hsehld	14.6	15.4
Precision Workers	14.4	11.1
Operators, Fabricators etc.	16.2	15.2
Farming, Forestry, Fishery	3.3	2.8

The above table affirms the projections of increases in managerial, professional, technical and service oriented workers, both in numbers and in proportions to total employment.

The following chart indicates the projected fastest growing and fastest declining occupations during the period 1984-1995.

FASTEST GROWING OCCUPATIONS	FASTEST DECLINING OCCUPATIONS
Paralegal Personnel	Stenographers
Computer Programmers	Sewing Machine Operators, Shoe
Computer Systems Analysts	Railroad Operators
Medical Assistants	Rail Car Repairers
Data Processing Equipment Repairers	Furnace, Kiln Operators
Electrical & Electronic Engineers	Shoe & Leather Wkrs & Repairers
Elec & Elec Technicians & Technologists	Private Household Workers
Computer Operators, X Peripheral Equip	Telephone Install & Repairers
Travel Agents	Sewing Machine Oper, Garment
Physical Therapists	Textile Machine Operators
Physician Assistants	Mach Mntce Mech, Textiles
Sec. & Fincl. Svcs Salesworkers	Statistical Clerks
Mech Engineering Techs	Ind Truck & Tractor Operators
Lawyers	Central Office Operators
Correction Officers & Jailers	College & Univ Faculty
Accountants & Auditors	Farm & Home Mgmt Advisors

Most analyses of future job opportunities focus on the employment growth in industries and occupations. Because faster growing industries and occupations generally offer better opportunities for advancement, employment growth is an important gauge of job outlook. However, it is not the only one. Another element in the employment outlook is replacement needs. Replacement openings occur as people leave occupations for the following reasons:

- transfer to other occupations as a step up the career ladder or to change careers
- temporarily leaving the labor force to return to school or care for a family
- leaving the labor force permanently due to retirement.

As a consequence, replacement needs are more important than job openings due to growth in an occupation. Estimates for openings due to replacement indicate that they are from 2 to 5 times greater than growth openings in many occupations.

A third consideration in evaluating the data on occupational demand is the availability of workers in various occupations. Very often the supply exceeds the demand despite growth and replacement needs because the supply of workers has been expanding at a faster pace than either.

Another element in analyzing occupational demand is to consider those occupations which will show the largest growth in numbers of jobs. The following table lists those occupations that will generate the most jobs in the economy during the 1984-1995 period:

OCCUPATION	% CHGE 1984-1995	% TOT JOB GROWTH
Cashiers	29.8	3.6
Registered Nurses	32.8	2.8
Janitors & Cleaners	15.1	2.8
Truck Drivers	17.2	2.7
Waiters & Waitresses	26.1	2.7
Wholesale Trade Salesworkers	29.6	2.3
Nursing Aides	28.9	2.2
Salespersons, Retail	12.6	2.2
Accountants & Auditors	34.8	1.9
Teachers, Kindergarten	20.3	1.9
Secretaries	9.6	1.4
Computer Programmers	71.7	1.5
General Office Clerks	9.6	1.4
Food Preparation Workers	22.1	1.4
Fast Food Preparation Workers	17.9	1.3
Computers Systems Analysts	68.7	1.3
Electrical & Electronic Engineers	52.8	1.3
Electrical & Electronic Eng Techs	50.0	1.3
Guards	25.6	1.2
Automotive Mechanics	20.1	1.2
Lawyers	35.5	1.1
Cosmetologists	28.7	.9
Cooks, Restaurant	29.7	.9
Maintenance Repairers, Genl Util	15.6	.9

A comparison of the fastest growing occupations and those that generate the most jobs shows that all the fastest growing jobs require education beyond high school, whereas only one-third of the occupations that produce the most jobs require education beyond the 12th grade. A further observation indicates that those jobs that are not professional primarily fall into the service type occupations. A fact of particular interest is that not one blue collar job (precision workers, assembly and construction workers) appear on either list.

Occupational projections are primarily used by counselors, career analysts, job training program administrators, business developers, students and community agencies, to evaluate choices of careers relative to employment opportunities as well as sources of labor supply.

It is, therefore, important to evaluate those occupations which are projected to grow the fastest in the next decade vis a vis those which are generating the most jobs. Those occupations that will be growing the fastest are falling in the health, personal and business services industries, while those that will employ the most workers are projected to fall in the services industries. The former are primarily professionals and/or paraprofessional occupations which require education beyond high school, reflect salaries above average and generally enjoy low turnover rates, thereby indicating that demand will be more moderate than the latter group of occupations. On the other hand, those occupations falling into the group generating the most jobs, workers are often trained on-the-job, required educational skills are usually at the high school or vocational school level, have a high turnover rate and salaries are at the low end of pay scales. These jobs are particularly good for new entrants to the labor force, those who want part-time employment and those with few skills, but they have little place for training and career development in the long run.

It should be noted that in some few instances, occupations appear on both lists (lawyers, engineering technicians and technologists, computer programmers, accountants and auditors). When making career decisions consideration should be given to those occupations that are projected to grow the fastest and to generate the most jobs as well.

In keeping with the projected slow growth in manufacturing it should be noted that most of the occupations of fastest declining occupations fall into the blue collar categories.

For the balance of the decade, industry growth is expected to average approximately 2.2 percent per annum. Most major industry divisions are expected to grow at slower than average rates for the next five years. Industry growth rates are a primary determinant of occupational demand and supply, in that the occupations that are heavily represented in those industries with high growth rates are more in demand than those represented in industries that are declining.

The Colorado economy follows the national trends closely in projecting occupational demand. Therefore, in assessing the list of occupations which will generate the most jobs in Colorado (see table below), the greatest proportion of jobs fall into the service oriented occupations: waiter/waitress, cashier, secondary school teacher, maid, and food preparation worker.

OCCUPATIONS GENERATING MOST JOBS IN COLORADO 1985-1990

Waiter/Waitress	General Office Clerk
Sales Clerk	Kitchen Helper
Sales Representative	Food Preparation Worker
Cashier	Store Manager
Janitor/Porter	Professional Nurse
Accounting Clerk	Truck Driver
Mail Clerk	Teacher, Secondary School
Typist	Supervisor, Blue Collar
Bookkeeper, Hand	Stock Clerk, Sales Floor
Nurse Aide/Orderly	Accountant & Auditor
Stock Clerk, Warehouse	Delivery Route Worker
Secretary	

Very few of the occupations listed above require education beyond the 12th grade, and most of them usually result in on-the-job training. The Colorado economy should enjoy good growth in the health care, retailing, and finance and insurance sectors, thereby requiring workers with skills in the fastest growing as well as the largest growing occupations. Those occupations listed in the above table plus some of those listed as fastest growing nationally (computer programmers and systems analysts, data processing equipment repairers, medical and biologic technicians and technologists, to name a few) will be in demand for the balance of the decade, and into the 1990's.

As we approach the 1990's old measurement methods of determining demand and supply in the labor force will undergo some radical changes. Many of the younger more educated workers today already look at their current careers as temporary and expect to have two or three different occupations during their worklife. As we enter the 21st century, the rapidity with which technological and scientific changes occur in various occupations will require workers to continue their education in order to keep up with their jobs, or in order to be able to adapt to new skills as old ones become obsolete. Occupational changes, obsolescence, and mobility will make it almost impossible to determine occupational supply in the future, a situation that at best has always been difficult.

SECTION III

GENERAL DEMOGRAPHIC INFORMATION

COLORADO AND THE UNITED STATES

This section contains tables and graphs on Colorado's labor force and population, as well as personal income data and estimates of the number of persons below the poverty line. Many of the estimates are presented by race and ethnicity.

AREA State of Colorado

ESTIMATED LABOR MARKET DATA SUMMARY

FISCAL YEARS '86, '87, '88, '89

SECTION IV

EMPLOYMENT SERVICE DATA

COLORADO

This section contains operations data from Colorado's Job Service Centers. Job Service applicants are presented by occupational group and race-ethnicity as well as other characteristics. An analysis of various services for the past two years is also presented, as well as operations goals for the current program year. Job Service applicant data for specific regions of the State is included in each of the specific geographic sections.

APPENDICES

A NOTE ON THE DATA

The industrial analysis of each Service Delivery Area and the State of Colorado is based on ES-202 data, which is supplied to the Colorado Department of Labor and Employment by all employers who are subject to the Colorado Employment Security Act. One of the items available in this data base is the number of employees on employer payrolls. These numbers are arranged by Standard Industrial Classification and geographic area and are then aggregated.

With the exception of the tables presented on page 13, all employment analyses allocate government to those private sector industries where comparable activity is being conducted. For example, public sector education is allocated to the major division of Services, and further to the two-digit SIC sector Educational Services. Public administration employment, since it has no private sector counterpart, was not allocated and is left to stand on its own, except on page 13, where it is included in the Government division.

Because most agricultural, livestock, and crop production employment is not covered by the Colorado Employment Security Act, the ES-202 series cannot reflect this employment. Total agricultural employment is not reflected in the Agriculture estimate on page 13.

The "Colorado Industry Employment Outlook" narrative and the "National Occupational Outlook" narrative were written by different staff economists. Minor differences in opinion, therefore, may be reflected in each of these presentations.

METHODOLOGY FOR THE ESTIMATION OF YOUTH POPULATION
AND LABOR FORCE BY COUNTY - FY 1987

1) Population:

Using 1980 Census data, a proportion of youth (age 16-21) population to total population is calculated for each county. This age group is expected to decline by .28 percentage points each year throughout the 1980's. We multiply .28 times 7.7 to arrive at an estimate of the percentage change in the age 16-21 proportion from 1980 to fiscal year 1987. The percentage point decline is subtracted from the original 1980 Census proportion of youth population to total population. This proportion is then applied to our current estimate of total population to arrive at an estimate of youth population.

2) Labor Force

Youth labor force participation rates by county are calculated using 1980 Census data. We want to bring these rates up to date by using a moving series of national data on youth employment. Form 1980 to 1984, the national youth participation rate fell from 63.6% to 60.8%. Thus, the 1984 rate was 95.6 percent of the 1980 rate. Thus, a factor of .956 is applied to each county's youth labor force participation rate to arrive at a current estimate of the youth participation. The rate is then applied to the estimate of youth population to arrive at an estimate of youth labor force.

3) Employed to labor force ratios by county are calculated using 1980 Census data. These ratios are each divided by the same ratio for the state. The resulting factors are then divided by the ratio:

$$\frac{\text{1980 national 16-21 employed/labor force}}{\text{1980 national total employed/labor force}}$$

The factors that result from the above calculations are multiplied times the current estimated state total employed/labor force ratio (from the table "Labor Market Data Summary, State of Colorado"). This results in current estimates of youth employment rates (employed divided by labor force) by county. These rates are then applied to estimates of youth labor force to arrive at estimates of employed youth.

4) Unemployed

Estimates of employed are subtracted from estimates of labor force, resulting in the estimated number of unemployed.

5) Unemployment Rate

Estimates of unemployed are divided by estimates of labor force and multiplied by 100, resulting in an unemployment rate.

6) Disadvantaged Youth Population

We begin by calculating the proportion of the total poverty population that the 16-21 age group comprised in 1980 (on a county basis). We

benchmark these ratios with the same type of ratio for the United States in 1980. The resulting ratio is multiplied times the most current (in this case, 1983) national proportion of youth in poverty to total persons in poverty. This gives us our current estimate of youth poverty to total poverty. The current ratio is applied to a current estimate of total persons in poverty to arrive at a preliminary estimate of disadvantaged youth.

Next, another adjustment is made to reflect the reduction of the proportion of total youth to total population (see #1 above). To adjust the disadvantaged youth figure accordingly, we use a factor that reflects the change in the total youth proportion from the previous year.

7) Unemployed Disadvantaged Youth

We begin by calculating the ratio:

$$\frac{\text{National age 16-21 disadvantaged unemployed}}{\text{National age 16-21 total unemployed}}$$

The result is in turn divided by the ratio:

$$\frac{\text{National age 16-21 disadvantaged population}}{\text{National age 16-21 total population}}$$

The resulting factor is used to adjust our county ratios of disadvantaged youth population to total youth population. This adjusted ratio is then applied to the total youth unemployed estimate by county to arrive at an estimate of disadvantaged unemployed.

ELIGIBLE LABOR SURPLUS AREAS FOR BIDDING ON FEDERAL CONTRACTS

BACKGROUND

Employers located in eligible labor surplus areas, as determined by the Department of Labor, and who meet other criteria, are entitled to preference in bidding on Federal procurement contracts.

The purpose of the labor surplus area procurement preference is to help guide a portion of the government's procurement dollars into those areas where people are in most severe economic need, e.g., areas with the highest unemployment.

The concept of targeting Federal procurement into areas of high unemployment dates back to the early 1950's. There was concern among government officials at the time that high unemployment rates and low utilization of plant and equipment in some areas would lead to erosion of the mobilization base and adversely affect production during the Korean Conflict. There was also concern that the cost of constructing new plants and relocating workers would cause an unnecessary drain on resources.

The Office of Defense Mobilization studied this problem and in February 1952 issued Defense Manpower Policy Number Four (DMP-4), implementing the idea of targeting Federal procurements to labor surplus areas. The program eventually became the responsibility of the Federal Preparedness Agency within the General Services Administration.

The labor surplus area program was largely unsuccessful in producing contract set-asides to employers in such areas because the program lacked a statutory base. This was changed in August 1977 with the enactment of Public Law 95-89 which amended the Small Business Act. Public Law 95-89 authorizes Federal agencies to "set-aside" contracts for competition among firms which agree to perform a substantial portion of the production of the contract in labor surplus areas. Contracts may be set-aside when an agency determines that offers will likely be obtained from a large enough number of eligible firms to permit the awards to be made at reasonable prices.

During the Urban and Regional Policy Group's review of Federal programs in 1977-78, the labor surplus area program was identified as one which had potential for providing relief for distressed areas. In March 1978, the General Services Administration was directed to work with each Federal agency to set targets for labor surplus area contracts, monitor agency performance, and report to the President every six months on the progress of each agency. These principles were contained in Executive Order 12073 which was signed on August 16, 1978.

In addition, Executive Order 12073 assigned to the Department of Labor the responsibility for classifying labor surplus areas. This was a continuation of the Labor Department's responsibilities since the inception of the program under DMP-4 in the early 1950's. The Department also has responsibility for classifying such areas under Executive Order 10582 which implements the Buy American Act.

CLASSIFICATION CRITERIA

Under the Department of Labor's classification procedures, an area is classified as a labor surplus area if the unemployment rate is at least 1.20 times the national unemployment rate during the previous two calendar years.

The procedures also provide for the classification on the basis of exceptional circumstances. Under these procedures, if an area does not meet the criteria necessary for classification as a labor surplus area, the criteria can be waived and the area classified when there has been a sudden rise in the unemployment in the area (other than seasonal or short term) that is not reflected in the area's data for the reference period. Such situations can occur as a result of natural disasters, plant closings of major employers, etc. which have a substantial impact on the area's employment and unemployment. In situations where such exceptional circumstances occur, the area can be classified as a labor surplus area upon petition from the appropriate State employment security agency.

Labor surplus areas are classified on the basis of civil jurisdictions, i.e., counties or county equivalents, as well as all cities with a population of at least 50,000. In four states (Michigan, New Jersey, New York, and Pennsylvania), townships of 50,000 or more population are also eligible for classification as labor surplus areas. In New England, the labor surplus area classifications for Maine, New Hampshire, and Vermont are based on county data while in Connecticut, Massachusetts and Rhode Island, where counties have very limited or no government function, the classifications use towns as county equivalents. By classifying labor surplus areas in this way, i.e., in terms of civil jurisdictions rather than labor market areas, funds can be directed to specific localities with high unemployment rather than to all jurisdictions in a given metropolitan area, not all of which may suffer from the same degree of unemployment.

The eligibility status of labor surplus areas is determined annually under the classification procedures. The annual listings are effective each October 1 and remain in effect for the following 12 months.

The reference period used in making the classifications is an average of the previous two calendar years. By using an average of 24 months of data, contacts can be targeted in areas experiencing high structured unemployment.

The reference period used in preparing the current list of labor surplus areas was January 1983 through December 1984. Because the national unemployment rate was above 8.3 percent, the 1.20 ratio was not used and the "ceiling" concept was used instead in preparing the annual listing. As a result, areas were included on the annual labor surplus area listing if their average unemployment rate during the reference period was 10.0 percent or above.

Ordinarily, the Department of Labor's listing of labor surplus areas becomes effective October 1st and remains in effect until September 30th of the following year. The listing furnished below, however, will remain in effect from October 1, 1986 until the Department completes implementation of the labor surplus area provisions of Public Law 99-272. An updated labor surplus area listing will then be made available.

ELIGIBLE LABOR SURPLUS AREAS	POLITICAL JURISDICTIONS INCLUDED

COMMONLY USED TERMS, ACRONYMS, AND ABBREVIATIONS

AFDC - Aid to Families with Dependent Children

All other nonag - nonagricultural self-employed, unpaid, family, and domestic workers.

Applicants available - all applicants available at end of period plus all new, new partial, and renewal applicants.

BLS - Bureau of Labor Statistics

CDET - Colorado Division of Employment and Training

CETA - Comprehensive Employment and Training Act

Civilian labor force - all civilian uninstitutionalized individuals, 16 years of age or older, employed or unemployed, by place of residence.

Civilian labor force participation rate - the ratio of the civilian labor force to the civilian uninstitutionalized population. Participation rates are usually published by sex-age groups and often are cross-classified by other demographic characteristics.

CPS - Current Population Survey

Continued weeks claimed - the sum of weeks claimed for partial or total unemployment under the unemployment compensation program.

Counseling interview - a face-to-face interview in which an employment counselor or employment counselor trainee (1) helps an applicant resolve problems of occupational choice or change or job adjustment and (2) obtains and records on the application and/or other appropriate applicant records one or more of the following: (a) a summary statement describing the counseling problem; (b) additional information contributing to a better definition of the problem or its solution; (c) a statement of an occupational plan or recommendation for the solution of the problem; and (d) when pertinent, a statement elicited in the course of follow-up concerning progress in carrying out the counseling plan and any further services needed.

Deregistration - denotes that a WIN registrant is being separated from the program for one of the following reasons: (1) employed after registration, off AFDC; (2) employed volunteer, not off AFDC; (3) applicant not eligible for AFDC; (4) applicant exempt from registration for work; (5) applicant sanctioned (removed for refusal to participate in program without good cause); (6) applicant off AFDC for non-WIN-related reasons such as death, moving, etc.

DOL/ETA - Department of Labor, Employment and Training Administration

DOT - Dictionary of Occupational Titles

Eligible Population: those individuals who are eligible for services under the Job Training Partnership Act, i.e., individuals whose income is below the poverty criterion.

Employed: those individuals, 16 years old and over, who did any work at all during the monthly survey week; includes full-time, part-time, and temporary workers. Individuals are also counted as employed if they have jobs but are temporarily absent from work.

Executive Order: a formal document issued by the President of the United States (or in Colorado, the Governor) which has the force of law. Executive Orders are compiled in Title 3 of the Code of Federal Regulations.

Filled opening: a job opening for which an applicant referred by a local Job Service office has been hired by an employer and has entered the job.

HEW: the Department of Health, Education, and Welfare (now split into the Department of Health and Human Services and the Department of Education).

Individuals placed: initial referrals, hirings, and entrance into jobs by applicants during a fiscal year. These activities together comprise "placement transactions".

Initial claim: an application for a determination of eligibility for benefits which certifies the beginning date (or the continuance into a new benefit year) of a period of unemployment.

JTPA: Job Training Partnership Act

Job Development contact: the process of soliciting a public or private employer's order for a special applicant for whom the local office has no suitable opening currently on file.

LMA: Labor Market Area

New Applicant: a person filing an application card (Form 511A) for whom a local Job Service Center has no previously prepared application card or whose previous application has become obsolete.

Nonagricultural (nonag) wage and salary: refers to nonagricultural-established employment.

Not in labor force: includes all civilians 16 years old and over who are not classified as employed or unemployed.

Obtained employment: employment not meeting the definition of "placement" (see below). This term is applied to WIN registrants only.

Placement: the hiring by a public or private employer of an

individual referred by the employment office for a job or an interview, provided that the employment office completed all of the following steps: (1) Prepared a job order form prior to referral, except in the case of a job development effort on behalf of a specific applicant; (2) Made prior arrangements with the employer for the referral of an individuals or individuals; (3) Referred an individual who had not been specifically designated by the employer, except for referrals on agricultural job orders for a specific crew leader or worker; (4) Verified from a reliable source, preferably the employer, that the individual had entered the job; and (5) Appropriately recorded the placement.

Referral: the act of determining that an applicant is qualified for a job opening and arranging an interview for the applicant with the employer.

Renewal: the transfer of an applicant from the inactive file to active status; that is, he/she is again considered to be available for referral to job openings or employability-development services.

SIC: Standard Industrial Classification, published by the Office of Management and Budget, 1972.

SMSA: standard metropolitan statistical area

Testing: administering a test (standardized means of measuring an individual's possession of, interest in, or ability to acquire job skills or knowledge) to an applicant.

Unemployed: those individuals 16 years of age or older without a job who are available for work and actively seeking work.

WIN: Work Incentive Program
